County of Sacramento Fire Inspection Agreement

I agree to request a Fire District Inspection prior to calling the Sacramento County Building Inspection Division and to submit to soil engineer's acceptance on road compaction of 90% prior to any lumber on premises.

1. Prior to building, owner/builder must provide fire apparatus access road/driveway completion; soil engineer's test for compaction to 65,000 lbs. is required.
2. Rough-in inspection and hydro testing of sprinklers prior to covering walls or ceiling.
3. Final inspection for either Residential or Commercial.
4. If an automatic gate is installed, an approved Knox Lock override device shall be installed.

Failure to comply may result in a re-inspection fee of \$127.00 being levied and a hold being placed on all inspections.

The following Residential Conditions will be met prior to Final Inspection

- Adequate access to the dwelling available for emergency services:
_____ 16' road with 4" gravel _____ 20' road with 4" gravel
- Temporary water storage facilities prior to the existence of any combustible construction or storage
- Building Permit Release issued **only** upon completion of driveway/fire apparatus access with Fire Department
- Residential fire sprinkler design approved. System installed and hydro tested prior to frame inspection.
- Street sign and address number at driveway entrance installed prior to Final Inspection
