

Wilton Fire Department

Safety Bulletin

This bulletin is in regards to proper stowing of SCBA's in apparatus

All SCBAs that are located in the cab of any apparatus must be properly stowed for safe operation of the apparatus. Proper stowing includes the safety strap that goes across the SCBA that is located in all of the seats.

If an accident was to occur and the SCBA is not stowed properly it could become a projectile and injure our personnel even worse than what might be sustained from the accident. So in the interest of safety please stow all SCBAs that are located in the cabs of all apparatus properly.

Thank You!!

Rob Henkens, Safety Officer

Remember, We are all Safety Officers!
Be Safe!
